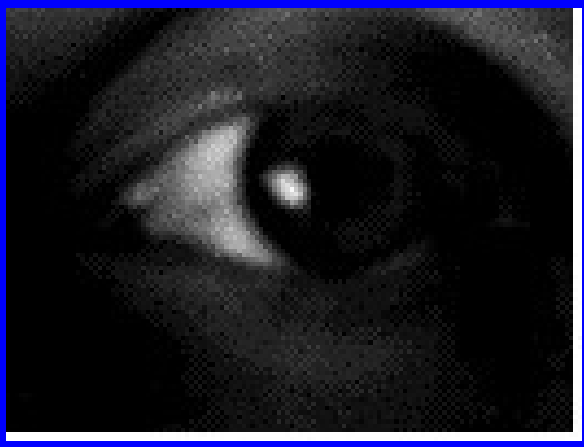
Driving Drowsy...
is a FATAL mistake!

Driving drowsy slows your reaction time, decreases awareness, and impairs judgment, just like drugs or alcohol. And, just like drugs and alcohol, driving drowsy can contribute to a fatal collision.



FACT:

Driver fatigue is the primary cause of at least 100,000 police-reported crashes and more than 1,500 deaths annually, according to the U.S. National Highway Traffic Safety Administration (NHTSA).

FACT:

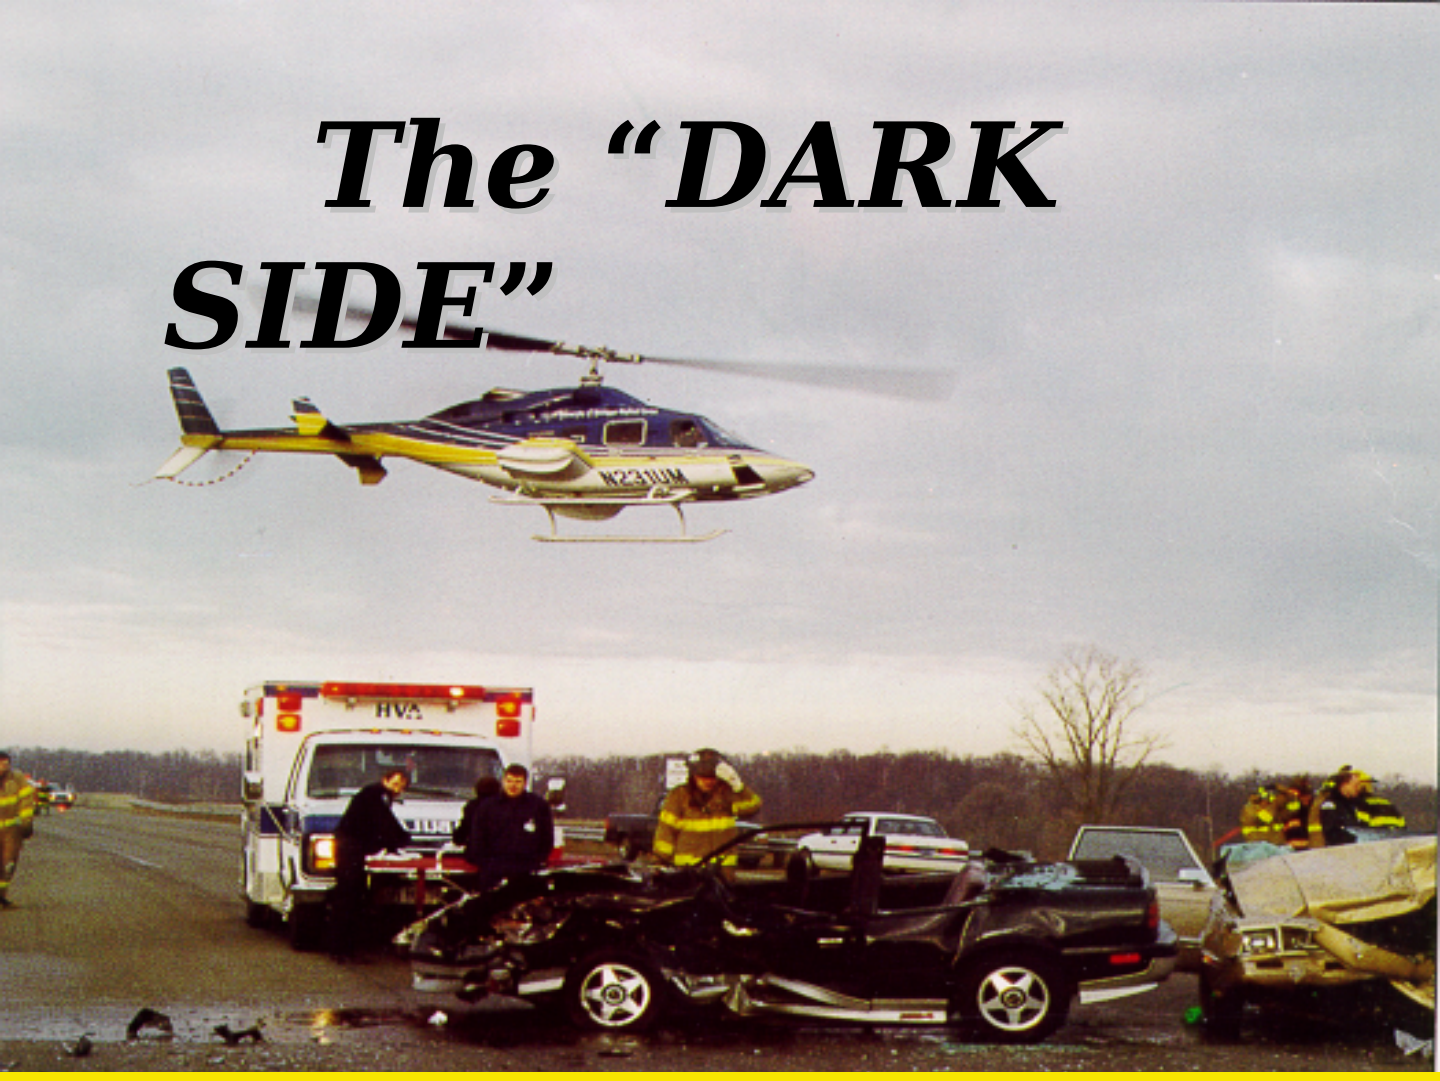
Accident rates vary during the course of the 24-hour day and mirror daily human alertness patterns. Accident rates have a peak in the mid-afternoon and an even higher peak in the overnight hours between 2 and 6 a.m.

FACT:

Memorial Day, July 4th, Labor Day...

There's a *"Dark Side"* to the American summer vacation season -- the inevitable news reports updating highway accident death tolls during long holiday weekends.

The "DARK SIDE"



Take a break

play a role in the high accident rates, most experts agree another factor is likely to blame -- *increased driver fatigue* (attributed to long driving hours, lack of sleep, and the demands of holiday activities).

Who is at RISK?

Anyone who DRIVES!

Who is MOST at RISK?

FACT:

Sleep-related crashes are most common in young people, who tend to stay up late, sleep too little, and drive at night. The peak age of occurrence is 20 years old.

Who is at RISK?

ALL Drivers are at RISK

especially when YOU are:

- **Sleep-deprived or fatigued.**
- **Driving long distances without rest breaks**
- **Driving through the night.**
- **Driving through the early afternoon.**

Take a break

Who is at RISK?

ALL Drivers are a RISK

especially when YO

are:

- **Driving at times when normally asleep.**
- **Taking medication to increase sleepiness.**
- **Consuming any alcohol-related products.**
- **Driving alone.**

Feeling sleepy?

WARNING Signs of Driving Drowsy:

Feeling sleepy?

IF YOU ARE DROWSY, TAKE ACTION!!!

***Recognize* the warning signs &**

Take Action Immediately!

You cannot predict when a micro-sleep may occur.

YOU must respond quickly to symptoms of fatigue by finding a safe place to stop!

Pull off into a safe area away from traffic and *TAKE A BREAK.* Spend the night at a hotel or at least take a brief nap!

Don’t count on the radio, open window or other "tricks" to keep

Preventive Measures

Plan Ahead Before Leaving...

Get a good night's sleep. The average person requires about 8 hours of sleep a night.

Preventive Measures

Plan Ahead Before Leaving...

Plan to drive long trips with a companion. Passengers can help look for early warning signs of fatigue, or you can switch drivers when needed.

Slow down

Preventive Measures

Plan Ahead Before Leaving…

Avoid alcohol and medications. Alcohol interacts with fatigue, increasing its effects.

Don’t drink and drive

Preventive Measures While Driving...

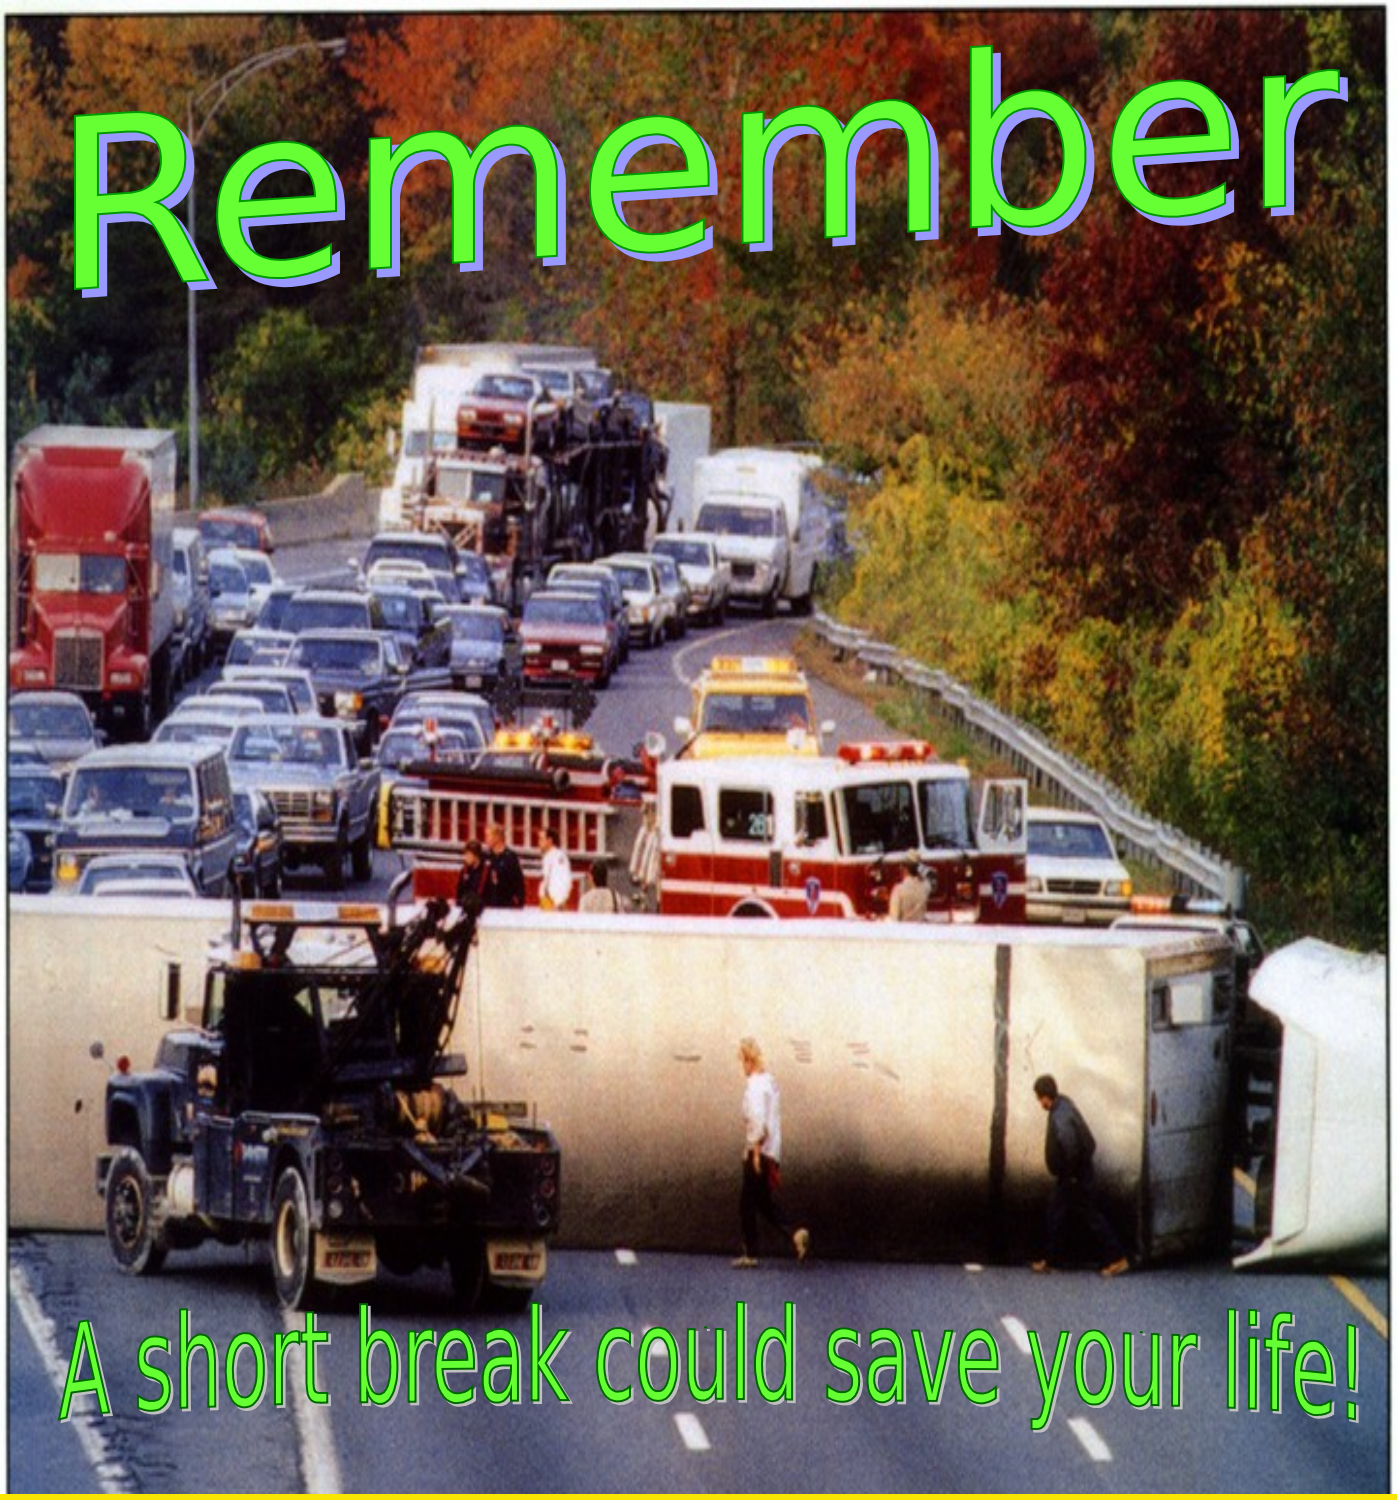
Stop at least every two hours and take a walk, stretch, etc.

Keep your vehicle well ventilated.

Avoid caffeine or other drugs to keep you awake.

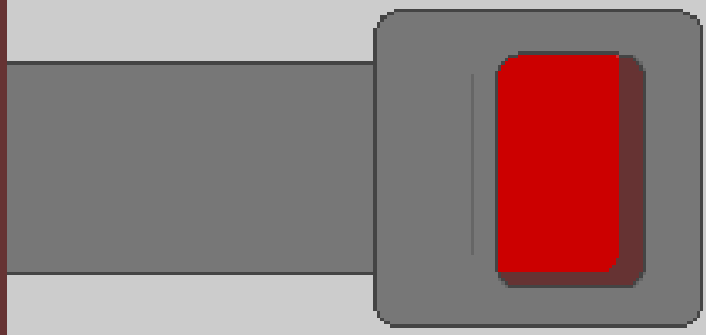
Eat lightly and avoid heavy, fatty foods.

Switch off your phone



Take a break

Seat Belts



The proper use of seat belts is estimated to save THOUSANDS of lives each year.
